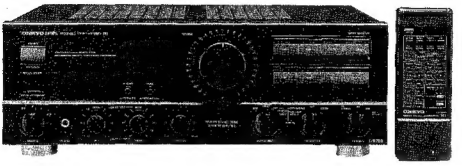
REF. NO. 3376

ONKYO® SERVICE MANUAL

Integrated Stereo Amplifier
MODEL A-R700



UG	220V AC, 50Hz
UQA	240V AC, 50Hz
UW	120V/220V AC, 50Hz/60Hz

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK ⚠ ON THE SCHEMATIC DIAGRAM AND IN THE PARTS LIST ARE CRITICAL FOR RISK OF FIRE AND ELECTRIC SHOCK. REPLACE THESE COMPONENTS WITH ONKYO PARTS WHOSE PARTS NUMBERS APPEAR AS SHOWN IN THIS MANUAL.

MAKE LEAKAGE-CURRENT OR RESISTANCE MEASUREMENTS TO DETERMINE THAT EXPOSED PARTS ARE ACCEPTABLY INSULATED FROM THE SUPPLY CIRCUIT BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

ADJUSTMENT PROCEDURES

Adjustments and Checking the Protection Circuitry

1. Preparations

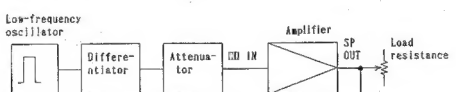
1) Place the unit on the workbench. (There should be about 15 mm of space between the base plate of the unit and the work surface.)
2) Set up the unit as follows.
   (1) No load
   (2) No signal
   (3) Volume turned all the way down
   (4) Speaker switch OFF
   (5) Power switch OFF
Note) Check the following points before making adjustments
   (1) The power switch should be OFF.
   (2) The interior of the unit should not be warm.

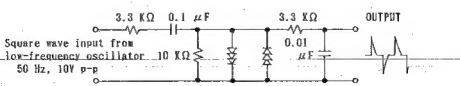
2. Idling current adjustment

1) Turn the power switch ON and allow the unit to warm up for about 10 minutes.
   (1) Adjust R535 (R536) so that the voltage at test point VCT-IID on the NAAF-3915 circuit board is 15mV±5mV.
   Note) Semi-fixed resistors enclosed in parentheses ( ) are for the right channel.

3. Check of operation of protection circuitry

1) Check of operation of protection relay
   (1) Confirm that the relay turns ON approximately 5 seconds after the power switch is turned ON.
   (2) The relay should turn OFF approximately 0.5 seconds after the power switch is turned OFF.
2) Check of DC detection and servo circuitry operation
   (1) Turn the power on with no load.
   (2) After the speaker relay turns ON, apply DC+200mV to the CD input terminals. Confirm that the relay turns OFF.
   (3) Confirm that operation is the same as (2) above when an input of DC−200mV is applied.
Note) Under no circumstances connect a load or short the speaker terminals when performing the above test.
3) Signal input from the circuit illustrated below with no load.
   (1) Confirm that the speaker relay does not turn OFF even when a 2 ohm load is connected when a peak value of 35V p-p is output.
   (2) Next, confirm that when a 1 ohm load is connected the speaker relay switchse OFF and ON a couple of times and then stays OFF.
Note) The period before that relay stays OFF should not last for more than 1 minute.
   Relay OFF status can be canceled by switching the power OFF.



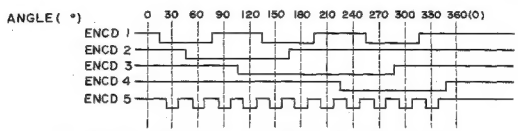


CIRCUIT DESCRIPTION

INPUT SELECTOR

The INPUT SELECTOR is switched over using a rotary encoder driven by a motor. When the INPUT SELECTOR is switched over with an input switch or the remote controller, an UP/DOWN signal is output from the microprocessor(Q801 LC6520H)to start the motor. By monitoring the output of the encoder, when the required position is detected, the motor is stopped.

The relationship between the INPUT SELECTOR positions and encoder outputs are explained below.



ENCD 4~1 (HEX)	F	E	C	D	9	8	A	B	3	2	6	7
INPUT SELECTOR		CD	AUX-1	AUX-2	TAPE-2	TAPE-1	DAT	TUNER	DIGITAL	DIGITAL-2	DIGITAL-3	PHONO

The INPUT SELECTOR actually operates as described below.

1) When the position is switched over with a key or the remote controller, SEL UP or SEL DOWN is output from the microprocessor to turn the selector in the direction which is nearer to the present position. (The increasing direction is UP, and the decreasing direction is DOWN.)

2) While observing the input of the ENCD5 signal from the microprocessor, the 4-bit input code from ENCD4-ENCD1 is read at the point where the signal changes from"H"to"L", and when the code of the target position is detected, the motor will stop. When the code is different, the motor will rotate further and the same 4-bit code will be checked at the next point where the ENCD5 input changes. The same operation will be repeated until it reaches the target position.

3) If the target position cannot be reached within 10sec., since the SEL UP/DOWN signal is output, the INPUT SELECTOR of the target position will flash (error display).

4) When the target position is changed before the selector reaches the first target position, it responds immediately, and changes the direction of rotation to the oen which is nearer to the new target position.

Operation when ROWER is switched ON

When the POWER is switched on (RES input "L"->"H"), the port and RAM will be initialized. Then, the levels of the initial MODE and BACK inputs are read to determine the required operation. The POWER and MUTING terminals of the microprocessor should be off when the memory is not backed up. When it is backed up, it should be set to the same condition as before power went down.

When the POWER is switched ON, the following operation will be carried out while the MUTE output is set to "H".

1) When it is not backed up

When ENCD5"L", the indicators of the INPUT SELECTOR corresponding to codes ENCD4-ENCD1 will light. Also, S1 and S2 will be output. When the ENCD5 input is"H", or when the 4-bit code is not effective or is not present, the rotary switsh will rotate in the UP direction and stop at the nearest effective position, the INPUT SELECTOR will be indicated and the port will output a signal. If an effective position cannot be found within 10 sec. after this operation has started, the rotation of the rotary switch will be stopped and all the indicators of the INPUT SELECTOR will flash with a frequency of 1 Hz.

2) When it is backed up

The positions of the INPUT SELECTOR before power went down will be indicated and the port will output a signal. When ENCD5 is"H", or when the 4-bit code is different from the last one, the rotary switch will be rotated to the last position. At this time, if the last position cannot be detected within 10 sec., the rotation of the rotary switch will stop and the indicator of the last INPUT SELECTOR will flash with a frequency of 1 Hz.

After this, the rotary switch will rotate once in the UP direction to clean the contact points, and will stop in the original portion. At this time, the INPUT SELECTOR indicator S1 and S2 outputs will not be changed.

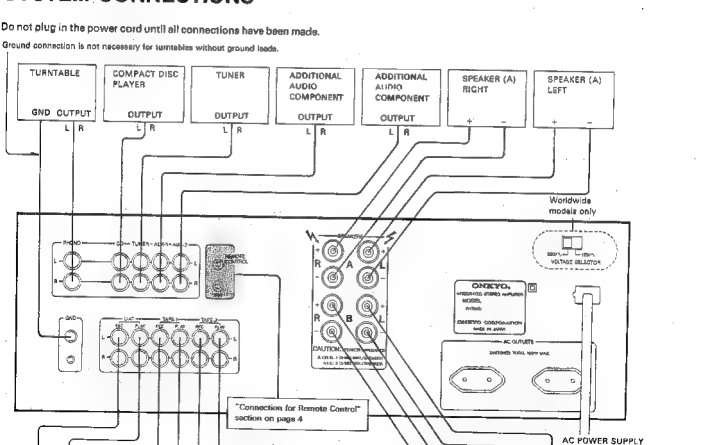
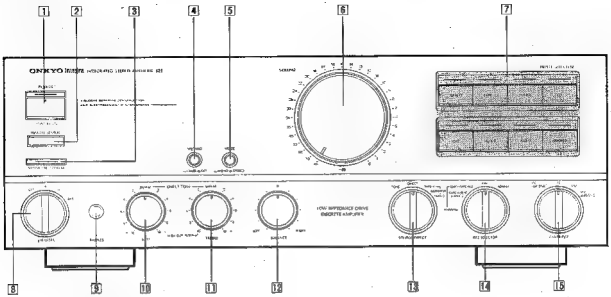
SYSTEM CONNECTIONS

Do not plug in the power cord until all connections have been made.

Ground connection is not necessary for turntables without ground leads.



FRONT PANEL FACILITLES



1 Power Button (POWER)
Press the POWER button to turn on the power.
Press this button to switch the on/off status of the power supply and the AC outlets on the rear panel. Power can also be turned on by using the remote control POWER button. An orange band over the power button indicates power is on.

2 Remote Control Sensor
This receives signals sent from RC-180S remote control transmitter.

3 MUTING –∞/STAND-BY Indicator
This indicator is illuminated and the unit enters STAND-BY mode, when the unit is plugged in. The power is turned ON/OFF by pressing the POWER button or remote control transmitter POWER button.
The indicator blinks on and off and the sound is muted when the remote control transmitter MUTING –∞ button is pressed.

4 Muting Switch (MUTING)
When this switch is set to the –20dB position, the volume level is reduced to one-tenth of the level set by the VOLUME control.

5 Mode Selector Switch (MODE)
STEREO (▬) : Position for normal stereo listening.
MONO (▂) : Both right and left channel signals are sent to each speaker. Position for listening to monaural recordings or when adjusting the BALANCE control.

6 Volume Control Knob (VOLUME)
This controls volume. Turning it clockwise increases volume. When controlling with the remote control transmitter, pressing "UP" and "DOWN" increases and decreases volume respectively. This control employs the system of simultaneous changes in volume and boost characteristics.

7 Input Selector Buttons and Indicators (INPUT SELECTOR)
These buttons are used to select the desired program source. Pressing one releases the previously pressed button, so be sure to press only one button at a time. An indicator shows which program has been selected.

TAPE-2 : Tape deck connected to the TAPE-2 jacks.
TAPE-1 : Tape deck connected to the TAPE-1 jacks.
TUNER : Tuner connected to the TUNER jacks.
CD : Compact disc player connected to the CD jacks.
DAT : Tape deck connected to the DAT jacks.
AUX-1, 2 : Additional audio component connected to the AUX-1 or 2 jacks.
PHONO : Turntable connected to the PHONO jacks.

8 Speaker Selector Switch (SPEAKERS)
This unit can drive two different speaker systems at once. Use this selector to activate either or both speaker systems connected to the rear panel speaker terminals. In the OFF position, sound is heard only through the headphones.
OFF : All speakers off—only headphones operate.
A : Speakers A
B : Speakers B
A + B : Both speaker systems A and B.

9 Headphone Jack (PHONES)
Stereo headphones with a standard binaural plug can be connected here.

10 Bass Control Knob (BASS)
Turn right to boost or left to attenuate bass. In the DEFEAT position, the BASS tone control circuitry is completely bypassed.

11 Treble Control Knob (TREBLE)
Turn right to boost or left to attenuate treble. In the DEFEAT position, the TREBLE tone control circuitry is completely bypassed. When turned to the extreme left (–10), the TREBLE control acts as a high cut filter to eliminate scratches, hissing and other high frequency noise.

About the Variable Tone Boosting System
This unit is designed to gradually reduce the effect of the tone controls (BASS and TREBLE) when the VOLUME exceeds a certain level. The variable boosting system gradually reduces the boosting effect of the BASS and TREBLE controls when one or both of these controls is turned beyond (to the right of) the center defeat position and the VOLUME control is turned beyond the center position. When the VOLUME is turned all the way up, the frequency response will be flat again. The VOLUME settings below the center position have no effect on the DIRECT TONE controls. Also, BASS and TREBLE control settings below (to the left of) the center DEFEAT position are not altered by the volume level.

12 Balance Control Knob (BALANCE)
Adjust to control the relative volume level of the left and right speakers or headphones.

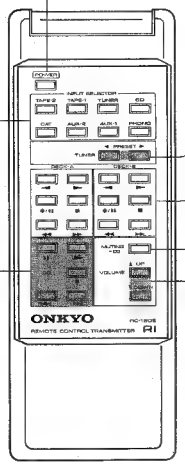
13 Source Direct Switch (SOURCE DIRECT)
TONE : The DIRECT TONE control, MUTING (−20dB), BALANCE and MODE of the performance can be altered for the source selected with the INPUT SELECTOR button, or remote control transmitter.
DIRECT : The volume of the source selected with the INPUT SELECTOR buttons or remote control transmitter can be input directly into the main amplifier. At this time the signal will bypass the DIRECT TONE, MUTING (−20dB), BALANCE, and MODE circuits.
MONITOR TAPE-1/TAPE-2
: The sound which is being recorded can be monitored, when the three-head tape deck is connected. When this is selected, DIRECT TONE, MUTING (−20dB), BALANCE, and MODE can be effective.

14 Recording Source Selector Switch (REC SELECTOR)
DAT or TAPE can be selected by the REC SELECTOR switch.
TAPE-1 ▶ DAT & TAPE-2 / DAT ▶ TAPE-1 & 2
: Use either of these settings for tape dubbing operations depending on which deck is being used for playback and which is being used for recording. For details, refer to the Operations section.
OFF : When not recording or dubbing.
SOURCE: Recording from the source selected by the INPUT SELECTOR buttons or remote control transmitter.

15 Cartridge Selector Switch (CARTRIDGE)
MC SUBSONIC : Turntable using an MC cartridge with subsonic filter.
MC : Turntable using an MC cartridge.
MM : Turntable using an MM cartridge.
MM SUBSONIC : Turntable using an MM cartridge with subsonic filter.

Use the MM position when a step-up transformer is being used with a turntable equipped with an MC cartridge.

Remote control transmitter RC-180S



Power Button (POWER)

Input Selector Buttons (TAPE-2, TAPE-1, TUNER, CD, DAT, AUX-2, AUX-1, PHONO)

CD Operation Buttons (CD)
These buttons are used to operate an ONKYO CD player with the RI mark.
⏸ : Press this button to pause the CD play back. To resume disc play, press the PLAY (▶) button.
▶ : Press this button to play the CD player.
■ : Press this button to stop the CD player.
⏮ : Press this button to go back to the beginning of the current track and again to skip back to the previous track.
⏭ : Press this button to skip to the next track.

Tuner Operation Buttons (TUNER)
◀ PRESET ▶ : Preset memory DOWN/UP buttons

Tape Operation Buttons (DECK-A, DECK-B)
These buttons control ONKYO double cassette tape decks that can be remote controlled. Use the DECK-B buttons to control single cassette tape decks with the RI mark.
◀ : The tape plays, moving from right to left, or, in the recording stand-by mode, recording begins.
▶ : The tape plays, moving from left to right, or, in the recording stand-by mode, recording begins.
●/⏸ : When this is pressed, the recording stand-by mode is entered.
■ : Interrupts all operations.
◀◀ : Fast forward from right to left.

Audio Muting Button (MUTING −∞)
This button temporarily switches off the sound from the speaker or headphone. Pressing this button will operate the A-R700 audio muting circuit. The audio muting indicator will blink on and off. Pressing the button again or using the POWER button to turn the power on will turn off the audio muting.

Volume Buttons (▲ UP, ▼ DOWN)

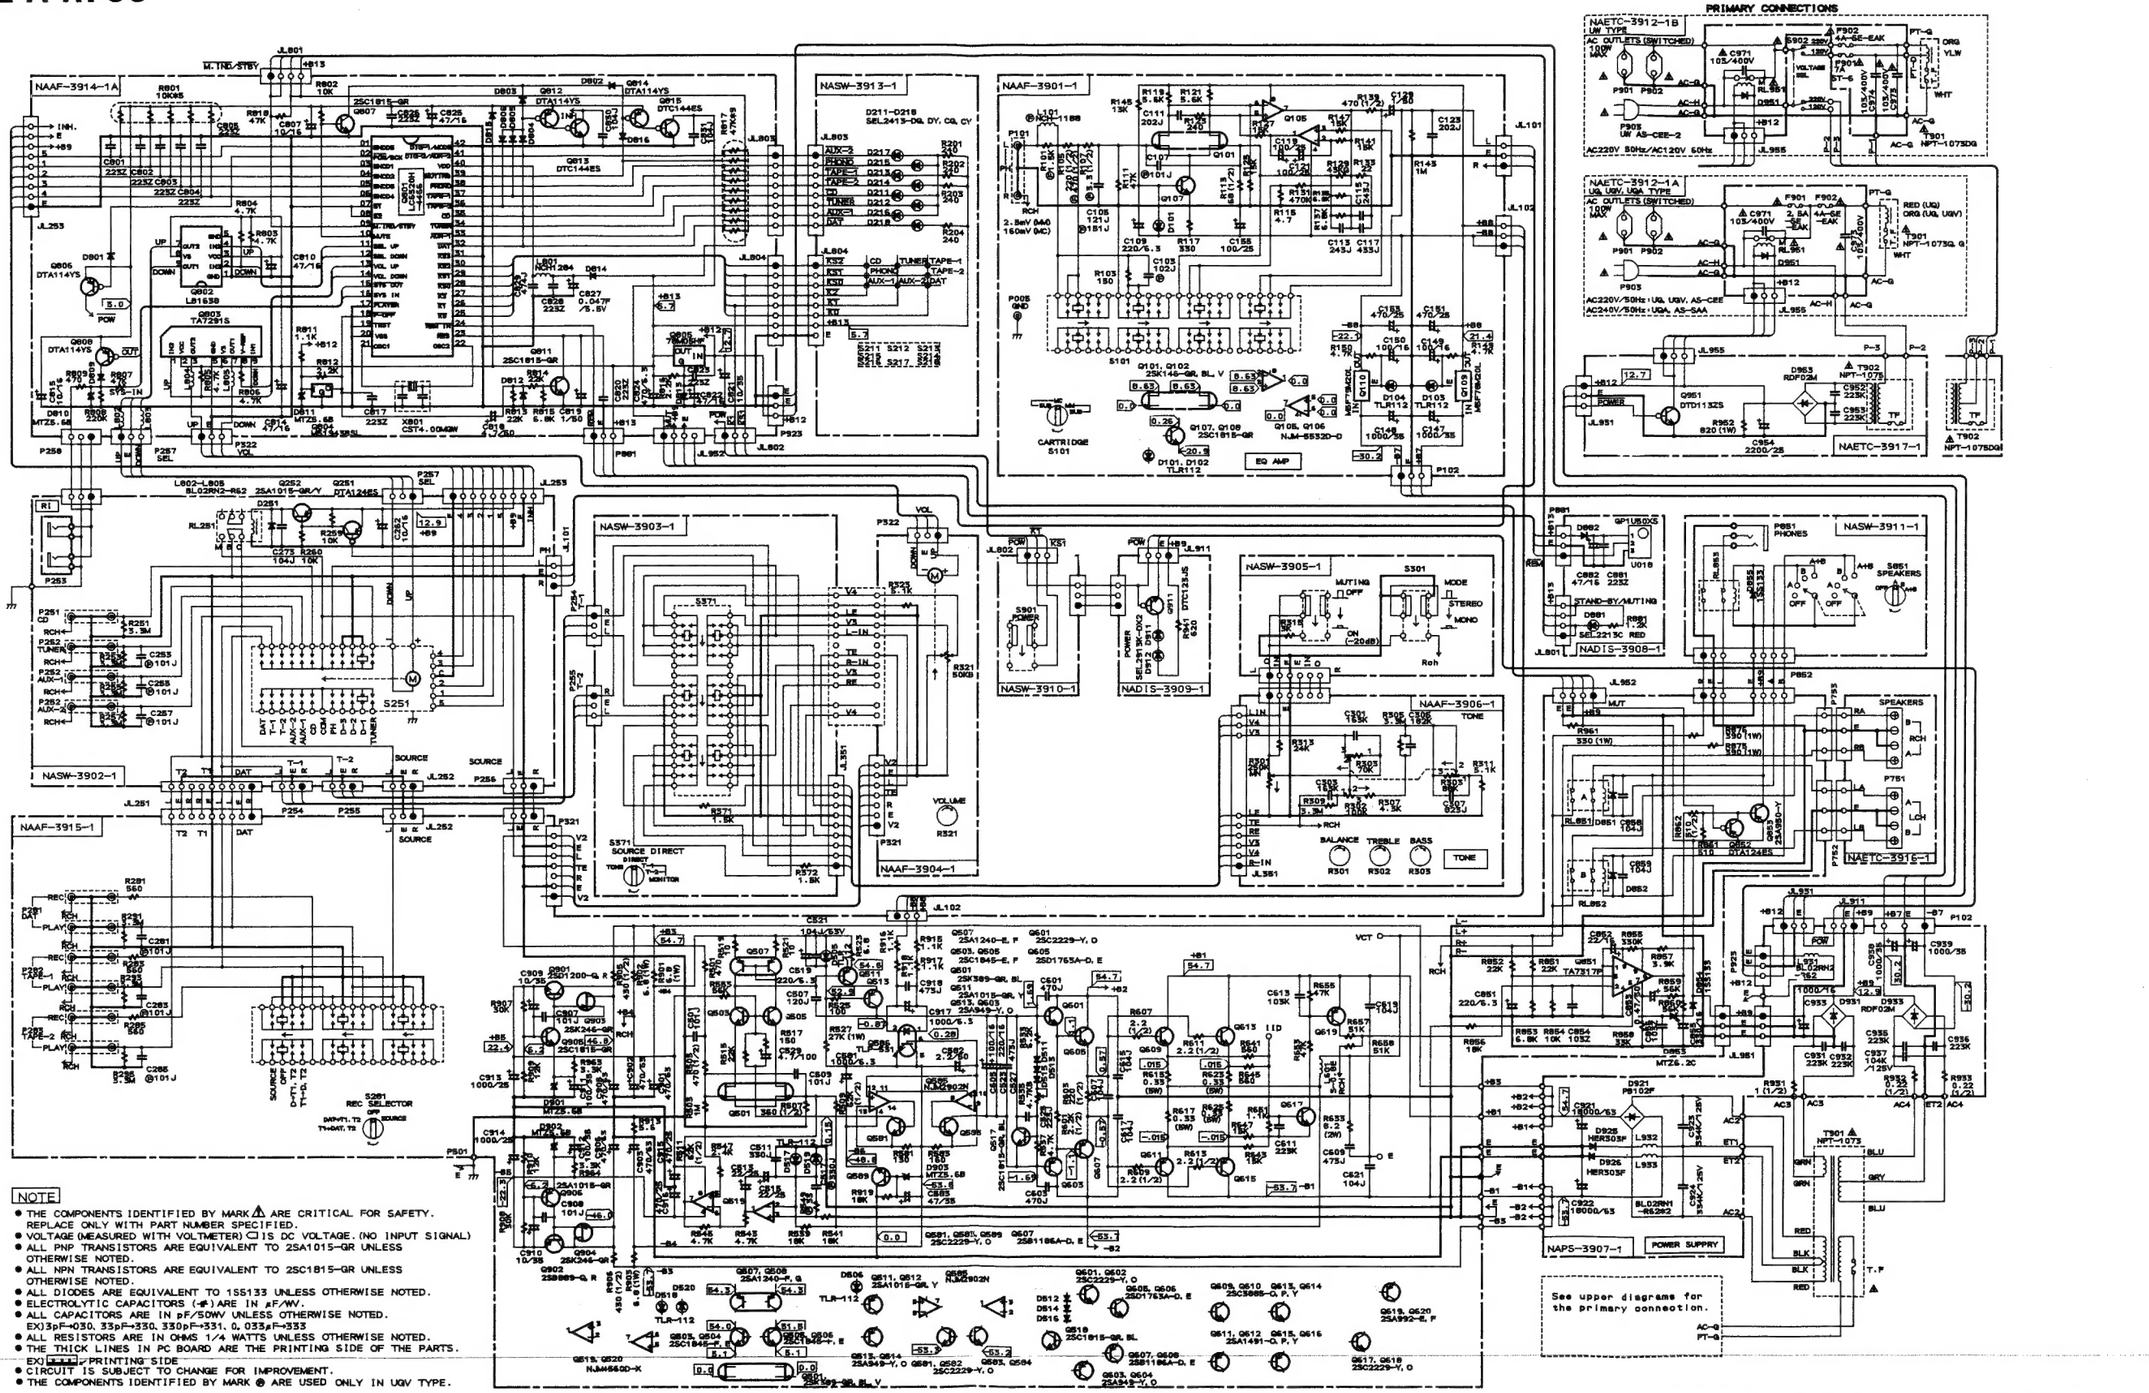
SCHEMATIC DIAGRAM
MODEL A-R700



NOTE

- THE COMPONENTS IDENTIFIED BY MARK ⚠ ARE CRITICAL FOR SAFETY. REPLACE ONLY WITH PART NUMBER SPECIFIED.
- VOLTAGE (MEASURED WITH VOLTMETER) ☐ IS DC VOLTAGE. (NO INPUT SIGNAL)
- ALL PNP TRANSISTORS ARE EQUIVALENT TO 2SA1015-GR UNLESS OTHERWISE NOTED.
- ALL NPN TRANSISTORS ARE EQUIVALENT TO 2SC1815-GR UNLESS OTHERWISE NOTED.
- ALL DIODES ARE EQUIVALENT TO 1SS133 UNLESS OTHERWISE NOTED.
- ELECTROLYTIC CAPACITORS (-#) ARE IN μF/WV.
- ALL CAPACITORS ARE IN pF/50WV UNLESS OTHERWISE NOTED. EX) 3pF→030, 33pF→330, 330pF→331, 0.033μF→333
- ALL RESISTORS ARE IN OHMS 1/4 WATTS UNLESS OTHERWISE NOTED.
- THE THICK LINES IN PC BOARD ARE THE PRINTING SIDE OF THE PARTS. EX) ▬▬ PRINTING SIDE
- CIRCUIT IS SUBJECT TO CHANGE FOR IMPROVEMENT.
- THE COMPONENTS IDENTIFIED BY MARK ⊛ ARE USED ONLY IN UQV TYPE.
